Introduction & Overview

In May 2006, VINE Release 35 included a feature that allows customers to add a "registration" URL link from their agency's website to the VINE System.

This link allows a user on a customer's offender website to connect directly from the offender, case, or probationer information to the respective details page in VINELink (www.VINELink.com). The user is then able to register for notification via the VINE System without having to search for the information again.

If a customer is interested in adding this feature to its website, use the provided URL information below, complete with the appropriate Site ID and Agency ID parameter values. Note that the Offender ID number must match in both systems. If not, additional logic will need to be added by the customer site.

Where does the VINE URL link to?

The VINE URL can be used to link to two kinds of Environments:

1. Production Environment
2. Test Environment (prep)

Depending on the individual State functionality, links can be created for the following types of information for each Environment:

1. Offender information
2. Case information
3. Probationer information

The test environment can be used for internal training or testing of new features before they are rolled into the Production environment.

Who can use the VINE URL Link?

Any Agency currently using the VINE system may provide a direct link from its own website to the VINE system where victims and survivors can register for notifications.
